

## Control: Service Pedestals

### Description

Lake Shore Electric Service Pedestals are designed to provide electrical power distribution to various areas such as parking lots, street lighting, traffic signal control, pump stations, cellular applications, recreational fields, pavilions, etc. These pedestals typically contain a main circuit breaker and a utility meter socket to meter the electrical power usage. They also may contain photocells and/or time clocks and power contactors to automatically control any outdoor lighting panels, power distribution circuits for outdoor receptacles, and other loads as required by the area it is serving.
